### Ancestor-Loss-Coefficient:

AVK3: 100  
 AVK4: 100  
 AVK5: 98.39

### Explanations:

The ancestor-loss-coefficient indicates, how many of the possible ancestors of a dog are present.  
 Example: Within three generations there are 14 ancestors possible ( 2 parents + 4 grandparents + 8 great-grandparents ), if one dog appears twice in the ancestor's table we calculate like this:  
 $AVK3 \text{ von } 13 / 14 * 100 = 92,86$

If an ancestor is not present in our database we assume that this animal is not present otherwise in the table. It is thus calculated in favor of the animal.
